The Aquamantys® 6.0 Bipolar Sealer is designed to provide hemostatic sealing of soft tissue and bone during surgery. Using proprietary Transcollation® technology, the 6.0 minimizes intra- and post-operative blood loss, resulting in reduced transfusion rates for patients.

Product Features and Benefits
- Delivers controlled thermal energy to tissue, which provides hemostatic sealing without the charring associated with standard electrosurgical devices
- Dual electrode configuration enables painting motion to provide hemostatic sealing across broad planes of tissue
- Bipolar technology alleviates need for grounding pad

Clinical Benefits
- Reduces transfusion rates by minimizing intra- and post-operative blood loss
- May reduce the need for other blood management products during and after surgery
- Reducing allogeneic blood transfusions may result in reduced post-operative complications

Surgical Applications
- Hip replacement procedures
- Knee replacement procedures
- Spine surgery
- Surgical oncology
- Orthopaedic trauma
Transcollation® Technology
Transcollation technology combines radiofrequency (RF) energy and saline for hemostatic sealing of soft tissue and bone at the surgical site. Vessels up to 1 mm may be occluded, reducing bleeding.

Aquamantys® System
The Aquamantys System delivers Transcollation technology through a proprietary RF generator and a single-use disposable bipolar sealer.
